220 Prepare and operate a stump grinder	12
Appendix 2 Sources of general information	13

Introduction

This assessment relates to the unit in the Qualification handbook. The assessment can be achieved at pass only. If any task is not yet met the candidate is unsuccessful.

This assessment is for the following units and learning outcomes:

220 Preapare and operate a stump grinder covering the following learning outcomes:

- 1. Know the health and safety requirements for operating a stump grinder
- 2. Be able to carry out a risk assessment on a site
- 3. Be able to prepare the equipment and site for stump grinder operations
- 4. Be able to operate a stump grinder
- 5. Carry out maintenance on a stump grinder

General guidance on the requirements for assessment can be found in the Assessor Guidance General guidance on the requirements for assessment can be found in the Assessor Guidance document available on the City & Guilds web site **www.nptc.org.uk**

The assessor must complete the Practical Table mark sheet for each candidate which should be kept by the assessor for a minimum period of twelve months.

Record of assessment (ROA)

A prepopulated record of assessment must be completed by the assessor following an assessment. The number of outcomes is listed above, these must be ticked into the relevant met or not met sections of the ROA.

ARAS Forms

An Assessment Result Advice Slip (ARAS form) must be completed by the assessor following an assessment. The ARAS is not a certificate but, based on the evidence of the candidate's performance, is a recommendation to City & Guilds that the candidate is either met or not met the assessment criteria. All feedback is to be recorded by the assessor on the feedback section of the ARAS form.

Assessment Time

The expected assessment time for this qualification is 1.5 - 3 hours.

Site/workshop requirements:

Site suitable for stump grinding operations with the machine the candidate is being assessed on with materials within the limitations of the head being used. A minimum of one stump of at least 380mm diameter. If the stump grinder is mounted to a base machine the candidate must already hold the relevant COC for this base.

Equipment/Machinery:

Stump grinder suitable for the task, all fit for purpose and suitably maintained. Any tools which may be needed to carry out any maintenance which may be required. Replacement cutter/teeth as relevant.

Consumables:

Fuels, oils and grease as may be required. PPE required as per site and machine. Operators manual and/or training materials should be available if needed.

This is not an open book assessment, however additional technical information may be sought from the relevant manufacturer's operator manuals or any other appropriate training or safety publication.

Practical observation descriptor table

Activity check li	number and description from ist	Assessment criteria
1.1	State legislation covering stump grinding operations	 May include the following: The Health & Safety at Work Act 1974 – specified duties under the act as an employee The Management of Health and Safety at Work Regulations 1999 – a risk assessment must be carried for all activities Personal Protective Equipment Regulations 1992 – PPE must be supplied and worn Manual Handling Operations Regulations 1992 – not to manually handle, use safe lifting techniques The Control of Vibration at Work Regulations 2005 – to reduce the risk to health from vibrations Provision and Use of Work Equipment Regulations (PUWER) 1998 – requires that regular checks are made Noise at Work Regulations 2005 – hearing protection must be worn over 85db COSHH - hazard awareness of toxic vegetation/chemicals Countryside and Wildlife Act 1981 – operation carried out at times to minimise the impact on wildlife RIDDOR - reporting of dangerous occurrences and accidents Provision and Use of Work Equipment Regulations (PUWER) 1998
1.2	Explain the risk assessment process	 Power Take Off (PTO) The risk assessment process may contain the following five steps: identify the hazards decide who might be harmed and how evaluate the risks and decide on precautions

220 Prepare and operate a stump grinder

		record the findings and implement them
		· .
		 review and update the assessment as necessary
1.3	State emergency planning procedures relevant to the work area	 Emergency procedures relevant to a work site may include: location name grid reference designated meeting place site location name nearest access point street name/district type of access (public road/light vehicles, fourwheel drive) suitable helicopter landing area phone number of nearest doctor location of nearest accident and emergency hospital and phone number works manager contact details your own contact number/mobile number other
1.4	State the environmental and public hazard considerations when dealing with arisings from stump grinding	 Environmental considerations to include: mouldy or dead material that produces fungal spores physical hazard to public hazard to road users from flying debris risk of blocking drains, watercourses etc hazard to wildlife, plants and trees hazard to property from flying debris
1.5	State precautions to be observed when working adjacent to highways	 Precautions observed when working adjacent to highways may include: wear high visibility clothing warning signs deployed in accordance with department of transport requirements exclusion zone / barriers set up to protect both operators and public position machine safely direction of flying debris discharge barriers set up as appropriate ensure constant awareness of traffic
2.1	Identify hazards and risks associated with the working area and the proposed work	Identify hazards (anything with the potential to cause harm) and risks (who might be harmed and how), relevant to: The work area The work to be done

	Interaction and the fact that the fact that the	
	Identify safety features of the stump grinder	 Safety features identified must include: warning / information symbols identified and interpreted machine safety guards secured
2.2		 machine safety guards secured controls identified and checked for
		function and direction of operation
		brakes, chocks, stabilisers and other security devices checked
		• sweep mechanism (if applicable)
	State factors to consider when manoeuvring a stump grinder to the	Machine moved to work position in safe manner may include:
	work position	 awareness of slopes and obstacles on the ground
		 use of banksman if required when reversing / moving stump grinder where visibility impaired
		machine moved at safe speed
		 appropriate use of operator controls for self propelled machines
		 appropriate use of hitching attachment/ three point linkage when manoeuvring a tractormounted machine
		 appropriate control of trailed stump grinder when manoeuvring on site
2.3		 machines have high centre of gravity therefore tendency to tip over
		chocking of wheels/tracks on slopes
		 avoid turning on slopes / ramps with tracked machine
		 operator must be on upper side when ascending or descending slopes
		 extreme care when climbing over an obstacle (e.g. roots, holes, steps) or change of angle at top of ramp as
		machine can rear up / slew violently
		 hydraulic fluid must be warm before negotiating uphill slope
		 ensure ramps / bridging to support weight of
		 machine are strong enough
	Carry out site inspection	Site inspection carried out may include:
	,	 walk the site and remove or mark hazards
2.4		 identifying location of underground services
		 confirm the condition of the site as acceptable for the operation to take place
		 report to the appropriate person if the site condition is unsuitable

	Carry out pre start checks on the	 set out warning signs and barriers (if appropriate) to advise or exclude public/animals implement suitable controls to protect the operator For trailed stump grinder:
3.1	stump grinder	 jockey wheel lowered or hitch attachment on vehicle secure brakes, chocks, stabiliser(s) applied as appropriate For 3-point linkage machines: attachment of lift arms, top link and stabilisers is secure machine is correctly aligned engagement of PTO shaft or other drive mechanisms is secure and safe all PTO guards are secure and in good condition For tracked stump grinders: tracks, rollers, sprockets etc are in safe condition and tensioned / aligned correctly hydraulic levelling / widening is employed as appropriate (if fitted)
3.2	Carry out safe starting and post operational checks	 Ensure that: safe starting zone selected all bystanders at an appropriate safety distance visual pre start checks carried out stump grinder started in accordance with manufacturers recommendations throttle control adjusted to achieve full working speed operator protection and restart mechanism checked for correct operation (if fitted) emergency stop control checked for effectiveness all controls functioning correctly stump grinder stopped safely and correctly, key removed
3.3	Prepare the material for grinding	 Ensure that: remove debris from around stump base cut stump down to ground level, if applicable erect screen/barriers, as appropriate
3.4	Use Personal Protective Equipment (PPE) and machine safety features for stump grinding operations	As per manufacturers recommendations, PPE should include appropriate: • safety helmet

		- ava protaction
		eye protectionear defenders
		• gloves
		non snag clothing trausact to protect from their a debrie
		 trousers to protect from flying debris
		safety boots with protective toecaps
		 personal first aid kits should be available
		 additional PPE as required by the risk assessment
	Carry out the grinding operation	Operate machine to grind a tree stump of at least 380mm diameter as per site specification
		Ensure that:
		 safety procedures are adopted
		area clear of other persons
		 engine speed/gear set to obtain optimum output
		 optimum depth of swath across stump is obtained
		 stump is ground to specified depth
		 arisings disposed of / back filled appropriately
		Factors to consider when dealing with larger stumps:
4.1		 disengage cutter wheel
		 ensure cutter wheel is stationary before repositioning
		 back fill arisings to improve stability
		• re-position machine to remove stump in
		sections Convert to transport position:
		 isolate power source and convert to
		transport position as per manufacturer's recommendations
		Site checked and tidied:
		site is safe and secure
		 debris cleared according to site specification
		breakdown the site
	Explain the removal and replacement of the cutters	Explain the removal and replacement of two cutters
		 as per manufacturer's instruction book
		 ensure that machine is safe to work on
5.1		 ensure that damaged cutters identified
		 use of setting tools
		 remove cutters
		 replace new/replacement cutters

		tighten all mute to compatiton out in a
		tighten all nuts to correct torque setting
		clearances checked on completion
		Possible causes of damage to teeth may include:
		 loose mountings / bolts / nuts
		 over-tightened bolts / nuts
		soil damage
		 damage from metal / stone / hard objects
		Possible consequences of poorly maintained cutters could include:
		 machine not working efficiently
		 cutting mechanism overheats/ warps
		increased likelihood of jamming
		increased vibration
	State post operational checks to be	Post operational checks may include:
	carried out on the stump grinder	 stump grinder inspected and cleaned to establish any wear, damaged and/or missing components through use
5.2		 ensures any defects can be rectified before it is next used
		 other operators / supervisor etc. can be informed through a reporting procedure that defects are present
	Carry out maintenance on the stump grinder	Maintenance tasks carried out as outlined in manufacturer's or operators instruction book, including:
		wear appropriate PPE
		ensure that machine is made safe
		 key removed oil level sufficient
		air filter inspected and cleaned
		 cooling system inspected & cleaned & coolant level checked (if appropriate)
		 fuel system, starting and charging systems inspected and commented on
		electrical system checked for damage
5.3		 greasing and lubricating points
		 pulleys, clutches, shafts etc. inspected depending on style of machine
		 drive belts in good condition and tensioned correctly (if fitted)
		 hydraulic system checked for leaks or damage (hoses, pump, motors, spool valves, filters etc.)
		 linkages, pivots, springs etc. inspected and lubricated
		hydraulic oil level correct
		Cutting system checks may include:
		cutting teeth
		cutting teeth

		 are sharp clearance is correct are secure as per manufacturer's instruction book ensure that machine is safe to work on ensure that damaged cutters identified use of setting tools remove cutters replace new/replacement cutters tighten all nuts to correct torque setting
5.4	Reassemble stump grinder to a functional and operational standard	 clearances checked on completion Reassembled according to manufacturers recommendations as appropriate, check that: linkage/draw bar settings are correct stabilisers are used controls/handle bars set correctly brake is engaged if appropriate

Appendix 1 Practical table

220 Prepare and operate a stump grinder

All criteria must be achieved.

Activity number and description	Achieved
1.1 State legislation covering stump grinding operations	
1.2 Explain the risk assessment process	
1.3 State emergency planning procedures relevant to the work area	
1.4 State the environmental and public hazard considerations when dealing with arisings from stump grinding	
1.5 State precautions to be observed when working adjacent to highways	
2.1 Identify hazards and risks associated with the working area and the proposed work	
2.2 Identify safety features of the stump grinder	
2.3 State factors to consider when manoeuvring a stump grinder to the work position	
2.4 Carry out site inspection	
3.1 Carry out pre start checks on the stump grinder	
3.2 Carry out safe starting and post operational checks	
3.3 Prepare the material for grinding	
3.4 Use Personal Protective Equipment (PPE) and machine safety features for stump grinding operations	
4.1 Carry out the grinding operation	
5.1 Explain the removal and replacement of the cutters	
5.2 State post operational checks to be carried out on the stump grinder	
5.3 Carry out maintenance on the stump grinder	
5.4 Reassemble stump grinder to a functional and operational standard	

Appendix 2 Sources of general information

The following documents contain essential information for centres delivering City & Guilds qualifications. To download the documents and to find other useful documents, go to the *Centre Document Library* on *www.cityandguilds.com* or click on the links below:

Quality Assurance Standards: Centre Handbook

This document is for all approved centres and provides guidance to support their delivery of our qualifications. It includes information on

- Centre quality assurance criteria and monitoring activities
- Administration and assessment systems
- Centre-facing support teams at City & Guilds / ILM
- Centre quality assurance roles and responsibilities.

The Centre Handbook should be used to ensure compliance with the terms and conditions of the Centre Contract.

Quality Assurance Standards: Centre Assessment

Approved centres must have effective quality assurance systems to ensure optimum delivery and assessment of qualifications. Quality assurance includes initial centre approval, qualification approval and the centre's own internal procedures for monitoring quality. Centres are responsible for internal quality assurance and City & Guilds is responsible for external quality assurance. All external quality assurance processes reflect the minimum requirements for verified and moderated assessments, as detailed in the Centre Assessment Standards Scrutiny (CASS), section H2 of Ofqual's General Conditions. For more information on both CASS and City & Guilds Quality Assurance processes visit: the <u>What is CASS?</u> and <u>Quality</u> <u>Assurance Standards</u> documents on the City & Guilds website.

This document sets out the minimum common quality assurance requirements for our regulated and non-regulated qualifications that feature centre assessed components. Specific guidance will also be included in relevant qualification handbooks and/or assessment documentation.

It incorporates our expectations for centre internal quality assurance and the external quality assurance methods we use to ensure that assessment standards are met and upheld. It also details the range of sanctions that may be put in place when centres do not comply with our requirements, or actions that will be taken to align centre marking/assessment to required standards. Additionally, it provides detailed guidance on the secure and valid administration of centre-assessments.

Access arrangements - When and how applications need to be made to City & Guilds provides full details of the arrangements that may be made to facilitate access to assessments and qualifications for candidates who are eligible for adjustments in assessment.

The Centre Document Library also contains useful information on such things as:

- Conducting examinations
- Registering learners
- Appeals and malpractice

Useful contacts

About City & Guilds

As the UK's leading vocational education organisation, City & Guilds is leading the talent revolution by inspiring people to unlock their potential and develop their skills. We offer over 500 qualifications across 28 industries through 8500 centres worldwide and award around two million certificates every year. City & Guilds is recognised and respected by employers across the world as a sign of quality and exceptional training.

City & Guilds Group

The City & Guilds Group is a leader in global skills development. Our purpose is to help people, organisations and economies develop their skills for growth. We work with education providers, employers and governments in over 100 countries across the world to help people, businesses and economies grow by shaping skills systems and supporting skills development.

The Group is made up of City & Guilds, ILM, Kineo, The Oxford Group, Gen2, and Intertrain. Together we set the standard for professional and technical education and corporate learning and development around the world.
